

# DNC Seminar

## **"UNDERSTANDING AUTISM"**

Uta Frith

PhD, FmedSci, FBA, FRS

Institute of Cognitive Neuroscience, University College London.

**Wednesday 2<sup>nd</sup> of June, 14.30-15.30**

Palle Juul-Jensen Auditorium,  
Building 10G, Århus Sygehus, NBG

### ***SYNOPSIS:***

"I will outline five big ideas that have shaped our understanding of the signs and symptoms of autism since the 1980s. These ideas try to explain specific problems in the ability 1) to attribute mental states, 2) to exhibit emotional resonance, 3) to orient towards social stimuli, 4) to use context flexibly, and 5) to plan complex behaviour. Each of these theories contributes to a fuller picture of the origin and course of the signs of autism."

**ALL ARE WELCOME**

**DNC offers refreshments afterwards**
